*B*DATA IS SIMPLY
EAUTIFUL

EVERY DATA POINT IS TELLING
Data that is collected is becoming data that is utlized in this dramatic visual story about functional grace.
Created by data artist, Tatiana Plakhova.

What Goes In Doesn't Equal What Comes Out

An organization's ability to have visibility into collected clinical trial data is critical to every functional area involved in the development process. Although it's logical to think gaining insights from collected data should be a straightforward byproduct of collection, the daunting reality is that most organizations struggle to achieve this. eClinical Solutions' mission is to make clinical data acquisition, standardization, aggregation and analysis absolutely simple and easy. In our pursuit of this, we have become experts at taking data that was once an ambiguous listing and bring it to relevant and striking life through customized reporting solutions.

Bringing data to relevant and **striking life** through customized reporting solutions

Usefulness is in the Eye of the Beholder

eClinical Solutions will provide your organization with the reporting capabilities needed to quickly access clinical data and empower functional groups to make crucial development and business decisions expeditiously. Our teams of experts utilize both proprietary and industry-leading technologies to provide customizable and cost-effective reporting solutions.

Delivering quick access
to clinical data

We work with our clients in three distinct areas:

- Consult with end-users in organizations to obtain a complete understanding of their needs and how they want to use their data

- Design and build reporting solutions using dashboards and customizable business intelligence applications

- Train end-users on business intelligence platforms based on their intended use of the application

Our team uses a blend of technologies and business intelligence applications that allow intuitive visualization and interaction with clinical data, including JReview—the same tool the FDA uses to review data submissions. We ensure users will get deeper visibility for safety analysis, risk assessment and mitigation, and go/no-go decision making.

Examples of reporting solutions include:

- Recommendations for the most appropriate use of reporting functionality based on your needs

- Customized development of reports, graphs, profiles, dashboards, etc.

- The creation of reusable, standardized reports allowing you to analyze single or multiple clinical trials

- Multi-dimensional clinical data views by role (data managers, safety analysts, biostatisticians, medical monitors, clinical trial managers, medical writers, executive management, etc.)

- Knowledge transfer and change management through role-based training and documentation

eClinical Solutions ensures that your company can consistently and efficiently access, review, analyze and identify trends across trials so you can truly leverage clinical data to its fullest potential.

Take the first step toward truly interacting with your clinical data. Contact eClinical Solutions today for an engaging platform demonstration that will change the way you see data.
