elluminate® | DATA CENTRAL

Centralize and Simplify Data Review and Management

elluminate® Data Central brings together all of the data associated with your clinical trial into a single, integrated platform for data review and management — from any data source. With Data Central, data managers and medical reviewers work collaboratively to quickly and effectively manage study data, resolve queries and other data issues, and produce a high-quality database in near real time, without having to access multiple disparate systems, spreadsheets and listings.

KEY BENEFITS

Save Time Reviewing Data

- One environment for performing all data management activities facilitates in-stream data review
- Users review CRF data, listings, exception reports, and patient profiles; add comments, raise and resolve data issues and handle EDC data queries, all within a single, secure, and audited environment
- Trial teams share one source of truth about status of study data

Improve Data Quality

- Analytics facilitate targeted data reviews based on roles and automatically highlight areas needing attention, such as long-outstanding queries
- Users have more time to focus on the right data for their tasks vs assembling data sources
- Centralized environment eliminates the need to create and distribute multiple data exports, reducing the risk of introducing errors

Manage Data More Effectively

- Holistic view of the study for data, query, and issue statuses gives managers earlier insight into potential issues
- Out-of-the-box dashboard metrics and analytics enable more proactive, data driven management
- Work flexibly with role-based processes and multiple ways to navigate through data and listings

KEY FEATURES

Integrated Data Review

- Review, comment, and raise issues on any data or report including raw CRF data, mapped data, exception listings, safety reports, and more
- Quickly identify data changed since the last review by each role, to flag for re-review
- Raise and process EDC queries directly within the Data Central module without having to access another system

Actionable Analytics

- Create and access customizable graphical patient profiles including single and ongoing events, lab data, and more
- Drill down to the source data and raise issues directly from within the visualization
- Add comments, raise and resolve data issues, and handle EDC data queries

Role-Based Review

- Review data and listings according to role, track records that have been reviewed by role, and track records that were updated since the last review
- Identify data issues and assign to individual internal or external users or user roles for resolution
- Monitor and track issues by due date, assignee, site, subject, data domain, and more

Detailed exception listings are available in various combinations highlighting issues, queries and changes made since the last review

LEARN MORE

The elluminate® Clinical Data Hub is a cloud based enterprise software platform that makes clinical data acquisition, mapping and analysis easy and intelligent for clinical teams. More than 100 life sciences companies have used the elluminate platform and software enabled services from eClinical Solutions to regain control of their clinical trial data.
